U.S. Patent and Trademark Office **PTO-326** (Rev. 11/00)

Art Unit: 2855

1. The disclosure is objected to because of the following informality on page 16, line 13, "20" should be --22--.

Appropriate correction is required.

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-38 are rejected under 35 U.S.C. 102 (b) as being

anticipated by Krivitski et al. Krivitski et al. teaches an apparatus used in the method of determining an initial flow rate of a liquid, i.e., blood, in a conduit 12 having a catheter (26, 32) comprising: introducing a discrete volume change to the initial flow rate by injecting, in an injection port (40, 70), or withdrawing the discrete volume from the conduit (col. 5, lines 50-63); sensing (50, 60), within a conduit, a corresponding resulting change, which includes sensing an upstream location 14 and a downstream location 18, in the flow in the conduit using a flow, velocity, optical and pressure sensors (col. 2, lines 1016); and determining the initial flow rate in response to the introduced volume change and the sensed resulting change (col. 5, line 64 - col. 6, line 67); wherein sensing a corresponding resulting change includes sensing a dilution indicator (col. 6,

Art Unit: 2855

lines 18-28); controller 58 configured to determine the initial flow rate in response to the known volume change and the corresponding change; wherein introducing the volume of the indicator includes introducing a solution including at least one of saline and glucose into the conduit (col. 5, lines 56-59).

Applicant's arguments filed 4/1/02 have been fully considered but they are not persuasive. Applicant argues the term "volume change" has a specific meaning as set forth in the present application and thus Krivitski '989 does not teach "a volume change" as claimed. While applicant may be his or her own lexicographer, a term in a claim may not be given a meaning repugnant to the usual meaning of that term. See In re Hill, 161 F.2d 367, 73 USPQ 482 (CCPA 1947). The term "volume change" in the claims is used by the claim to mean "a known volume over a known time," while the accepted meaning is "a change in capacity. in a region." Thus, the Examiner believes Krivitski '989 does teach "a volume change" as claimed. In response to applicant's argument that the reference fails to show certain features of applicant's invention, it is noted that the features upon which applicant relies (i.e., a known volume over a known time) are not recited in the rejected claim(s). Although the claims are interpreted in light of the specification, limitations from the specification are not read into the claims. See In re Van Geuns,

Art Unit: 2855

988 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir. 1993). Accordingly, Krivitski '989 does teach the claimed invention and all arguments presented are not convincing.

5. THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Examiner Dickens whose telephone number is (703) 305-7047. Any inquiry of a general nature or relating to the status of this application should be directed to the receptionist or the customer service
